

ConnectME™

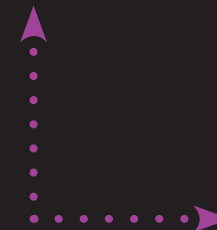

Do you ever have to be away from the business? Do you want to avoid feeling out of the loop? Shortcuts ConnectME gives you instant access to your Shortcuts system from anywhere in the world with an internet connection.

No Interference

When you're away from the business, you don't want that to interrupt running the day-to-day business and keeping on top of things. Using the latest in remote access technology, ConnectME will allow you to log-in and perform any function you can do while standing at your front desk.

You also don't want to interfere with the use of the business computer, while you are connected. Many other services don't allow simultaneous use, but ConnectME provides the ability to connect to your business computer remotely while another person is using that same computer. You can be monitoring the business without anyone realising you're there!

Give Others Access Too

Also, if you have more than one person you want to stay connected, you can have multiple connections using ConnectME. Useful for:

- Multiple managers logging in to run marketing searches, etc.
- Stylists and therapists checking schedules
- Accountants logging in to extract financial reports

ConnectME also protects security by requiring a login before entering Shortcuts, so you still know who is doing what in the system!
